

Preparing for PGT-M Checklist

- Research clinics and individual physicians through www.sart.org, clinic websites and online reviews. Consider IVF success rates, location, cost, genetic counseling support, and experience with PGT-M.
- Schedule a consultation with a reproductive endocrinologist to more fully understand the process and to confirm that the doctor and their team are a good fit for you.
- Meet with a genetic counselor to review your family history, discuss additional genetic testing that might benefit you, and answer your questions
- Meet with a financial counselor to learn about the potential costs as well as available funding options.
- Perform baseline fertility testing to ensure that you and your partner are good candidates for IVF.
- Undergo clinical genetic testing if necessary and coordinate genetic testing of family members.
- Schedule a consultation with a PGT laboratory to ensure that an accurate PGT-M test can be created for your embryos based on your specific gene, mutation, and family structure.
